Figure 2: Predicted marginal mean BMI trajectory for each category of NND adherence score. The plot on the left is from the unadjusted model; the middle plot on the confounder adjusted model (a)*; and the right plot the confounder plus mediator model (b)*. For clarity, only the 95% CI for NND tertile 1 (lowest) is shown (grey).

*Model a: adjusted for maternal age, parity, education, pre-pregnant smoking, physical activity, energy intake and offspring birthweight

Model b: model a + exclusive breast feeding duration.
